

Customer Journey and Data Flow

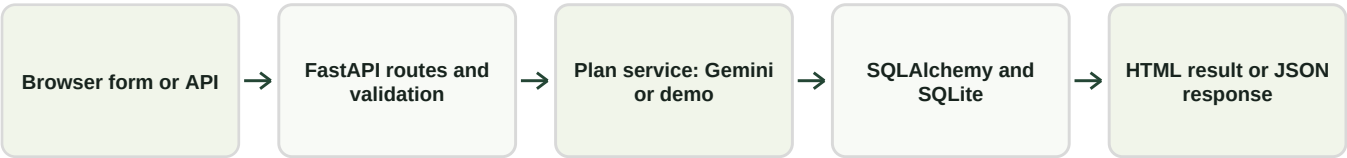

FitBuddy AI Fitness Plan Generator

A user journey and request path for FitBuddy.

Customer journey

Stage	User action	Success signal
Open	Read the app introduction and safety note.	Understands the app gives general fitness guidance.
Profile	Enter name, user ID, age, weight, goal and intensity.	Fields and accepted choices are clear.
Generate	Submit the form or a JSON request.	A plan and separate tip return with a mode label.
Review	Read the seven days and recovery notes.	The schedule is understandable and equipment-aware.
Adjust	Submit feedback about a practical change.	A revised plan and confirmation appear.
Return	Look up the saved plan or history.	The correct profile and plan are retrieved.

Data flow

Feedback returns through the application and updates the saved plan.

The application validates incoming values before generation. The AI service returns a plan and tip; the persistence layer stores the profile and plan record. Feedback is linked to the selected user ID, and the current revision is returned through the page or JSON route.
